

Attaching the Slice Form to the Base - Assembly Instructions

I would love to make small scale architecture slice forms like the Notre Dame and York Minster. They are absolutely exquisite. They are also cut from a high density cover stock on a laser cutter. I'm sure we can all afford that machine. I'm sure they are not easy to assemble with all the tiny pieces. I learned from these cards the art of design, how to fold the slice form and attach to the base. Note all of these cards use the two piece inside form attached to the card base.

Attaching the Slice Form to the Base - Assembly Instructions

These are pictures of the "A Walk in the Garden" base assembly. There are two corners that the slice form is attached to the inside layer. Using a needle and double strand thread the form is attached to the piece and square knotted under the inside layer. Once the slice form is attached to the inside layers it can be glued to the card base.

Attaching the Slice Form to the Base - Assembly Instructions

I have printed the template for this demonstration with line size 2 pt. It is not a full print of the 12 x 12 inch form and only shows half of the page. It contains a dotted line for the fold of the card base and a dotted rectangle for the location of the slice form. Within this box are the two sewing holes. Placing the slice form in the rectangle will help locate where on the slice form to make the hole on it. These hole were not precut on the slice form because of the possibility of causing tearing problems during assembly.

Attaching the Slice Form to the Base - Assembly Instructions

This procedure is done for the two diagonal corners of the slice form. Flatten the slice form and then slide it to the dotted rectangle matching the notch corner.

Note where the sewing hole is on the inside layer and mark the hole on the slice form.

Flip the slice form and repeat for the opposite corner. Pre-pierce the hole for easy assembly. Follow the next photos to sew to the inside form. This only shows sewing to one corner. You will do the same procedure for the opposite corner.

Attaching the Slice Form to the Base - Assembly Instructions

Sew from bottom to top then through the slice form.

Attaching the Slice Form to the Base - Assembly Instructions

Sew down through the inside form and tie off underneath.

Repeat for the other inside piece.

Attaching the Slice Form to the Base - Assembly Instructions

Fold the card base in half and then glue each inside layer down to the card base.

The card should now fold and the garden gate collapses inside the card.

Congratulations!!!
