

Instructions

Probably the simplest of my 3d Cards to make; just cut front and back of 3d card (I did in white card) and mountain fold the score lines nearest the oval aperture, and valley fold the outer score lines of both

Print pdf file (use “actual size” option in pdf print dialogue) of framed Art Deco Lady, (there is a blank oval frame as well so can use with your rubber stamps or any other artwork, decoupage etc)

Cut out Art deco lady by hand; it’s just a rectangular frame..

Stick to middle part of back of card – I added gems either side of the frame..

Stick front and back together by applying glue to the arc side pieces

Cut side panels, using the included matching cream jpg (just print it on card and use to cut) – can obviously use any other coloured card if wish – and stick to sides

Stick lace border design to bottom of card as in picture (there is a backing for this that you could cut in contrasting colour, not included in picture)
