

“Window Card” Instructions

From www.craftsuprint.com, written by Sarah Edwards

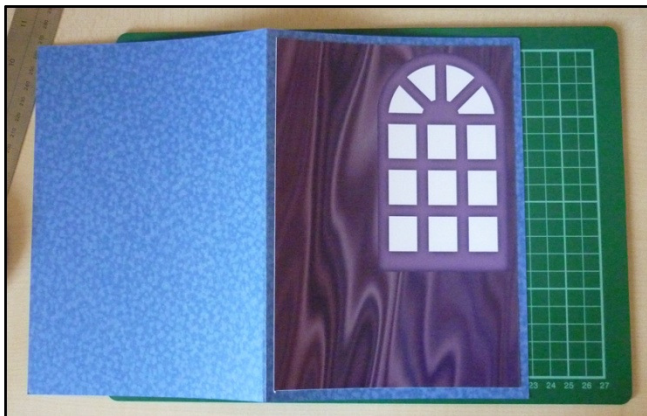

1. Print the main card shape onto photo paper or card.

2. Cut out the card front and stick it to the front of an A5 card

3. Open out your card and place it on a cutting mat

4. Using a craft knife and metal ruler, cut out all of the white sections of the window

5. Cut out the decoupage layers. Some sheets will have more than others.

6. Assemble the decoupage using 3D foam pads or silicon glue

7. Stick the topper to the front of your card and decorate as desired.

8. << Optional >> Add an insert to the inside of your card. After all, it's much more interesting to look through a window when there is a nice view!

I have a kit available containing ten different inserts which have been designed to go inside your window cards. Search for **cup248593_172** to find this item.

I chose to use the "night time" insert.
