

No hole over the edge one sheet step card tutorial.

This tutorial is for the no hole over the edge step card. Each card has a matching envelope, which can be purchased separately.

1. Gather materials: scissors, craft knife, tape runner or double stick tape, foam tape, score board, and scoring tool, and bone folder. Print out your sheet on good quality card stock or photo paper. For the envelope print on good quality paper.

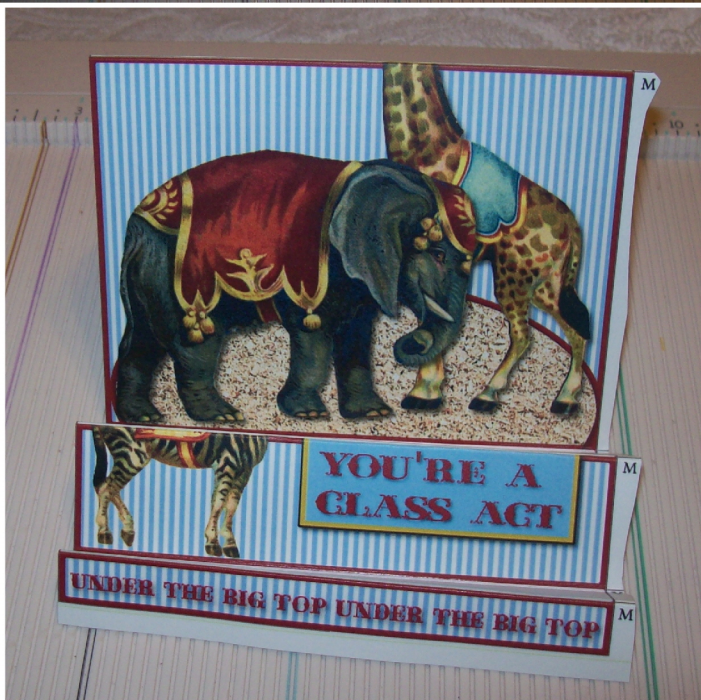

2. Cut decoupage elements away from the main card. Be sure to cut around the M's and V's on the main card section.

3. Cut out all decoupage elements, and set aside.

4. Score the M and V lines.

5. Mountain fold the M's.

Valley fold the V's.

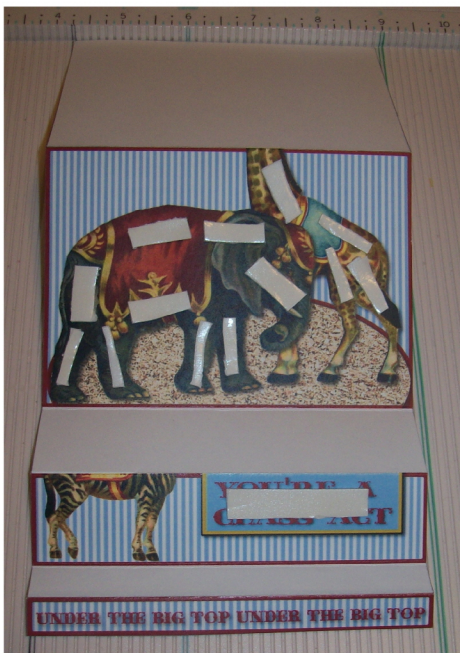

Your card should now look like this.

Use your bone folder to make your folds nice and crisp.

6. Trim away all excess from the card.

Your base is finished. Now it's time to add the decoupage elements.

7. Apply foam pads to the card base where you would like dimension, and double stick tape to the remainder of the decoupage elements. Attach your elements.

8. If you are making the matching envelope, cut it out, score, fold, and glue or tape the side flaps.
