

GateFold Card Tutorial

1. Gather materials...scissors, double stick (ds) tape, ds foam dots or dimensional glue, and gate-fold card blank. 2. Print off your sheets. One of the card front, and two of the insert. This will also be your card back panel and inside gate-fold panels. 3. Cut out all of the elements.

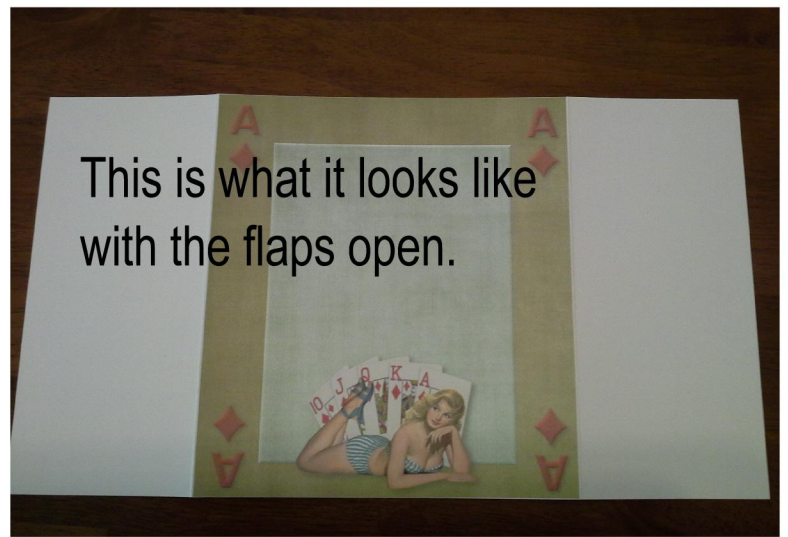

4. Attach the insert, then one of the panels, using ds tape. We will trim excess away later.

5. Attach the other panel. Now trim the card to size.

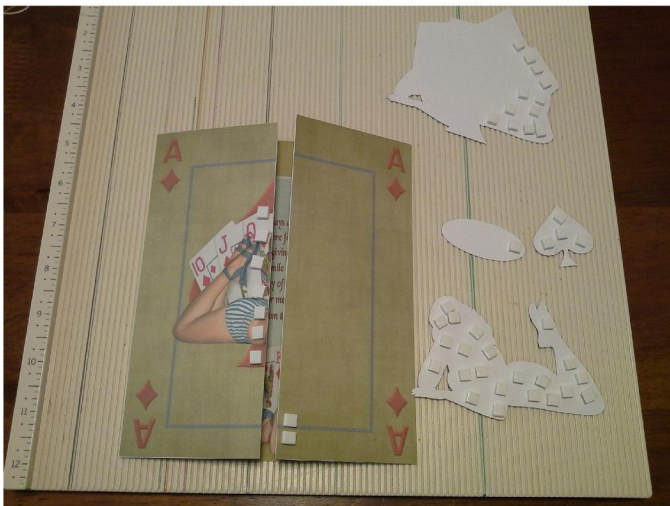

6. It should look like this

7. Now turn the card over to the back side. Attach the main panel to the card.

8. Flip the card over to the front side. Fold the flaps closed, and attach the two front panels to the card front, using ds tape.

9. Add ds foam dots to the decoupage elements being careful not to go past the center on the first layer. Attach the decoupage elements to the card front.

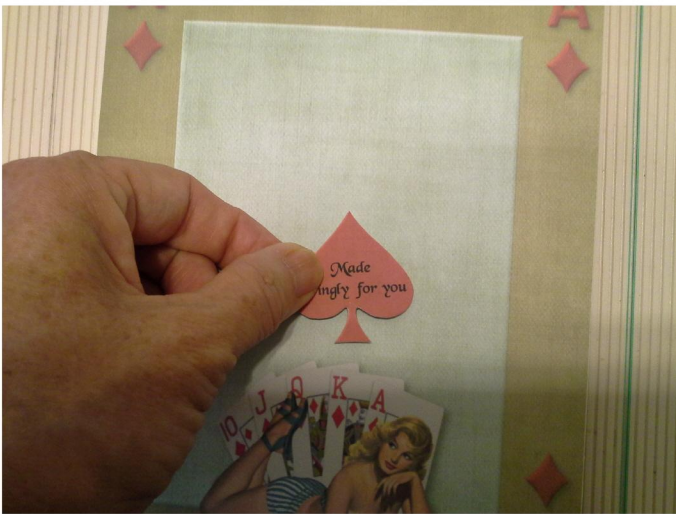

10. The sentiment tags do not come with the card, you can hand make one, or add one from your craft box. I added a personalized tag for my brother's birthday.

A. Adding the remainder of the decoupage elements.

B. A view of the front of the card finished

C. Adding decoupage element to the card back.

D. A view of the card back finished
