

Vintage Christmas Pyramage Shaped Cards

Mini Kits

Please read through the instructions before commencing your project.

These cards are very simple to make and therefore I feel do not require pictorial instructions.

Cut out the shapec card, score and fold down the cente line

Cut out the shaped pyramage (please note that the programme used to create the pyramage means that some images may be more intricate to cut than others)

Apply either silicone gel or 3D foam pads to each layer and stack in order of size one on top of the other.

Place pyramged piece on your card (it is your design so you choose what to do, the preview image gives you an idea how you may like to decorate your card)

If you do not wish to pyramage, the main image will look equally good on your card.

Use the rest of the embellishments on your sheet to decorate, and your card is complete.

The shaped cards are very versatile, cut them in half to use as a main card front then decorate.

Use these cards with some of your own embellishments

You could even cut the card in half and make easel cards, use the pyramage sheet embellishments to decorate an use as stoppers.

I am sure as a crafter you can come up with many more ideas, and I would be delighted to see them, so go CREATE!!!

Thank you for purchasing my Designs :}
